

Remote Job Market Intelligence Report

Overview

This report analyzes 1038 remote job listings collected from RemoteOK to understand hiring trends, skill demand, and role distribution in the global remote job market.

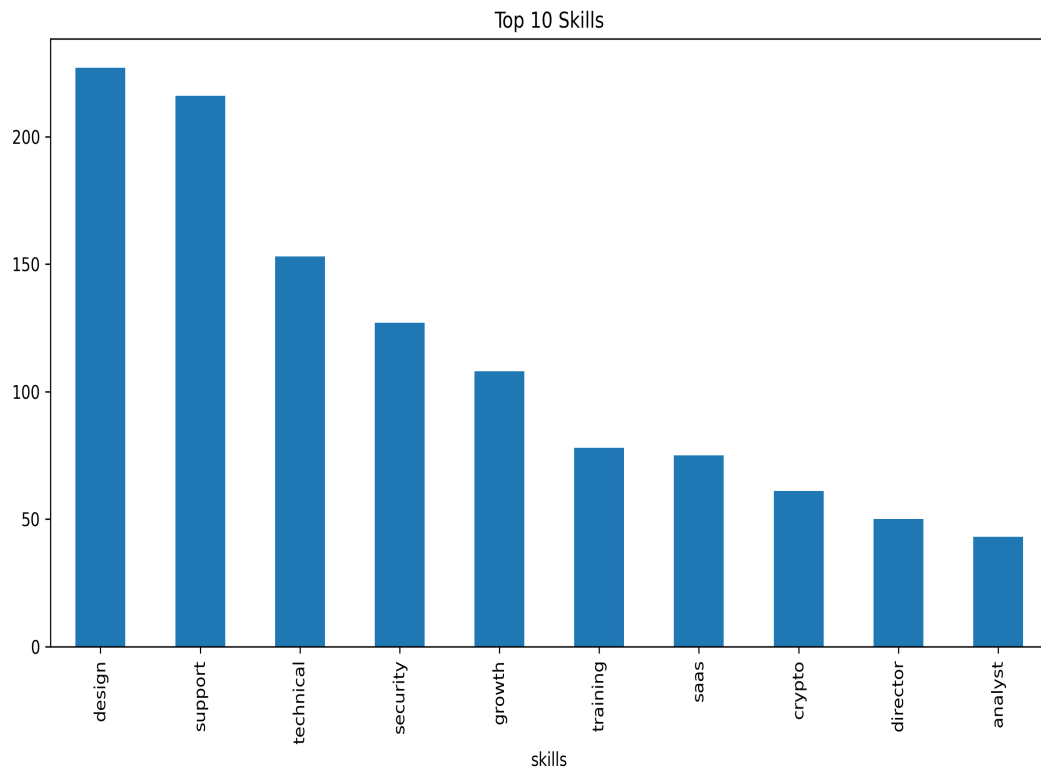

Top Job Roles

The most common remote roles are Software Engineer, Senior Software Engineer, Data Engineer, and Product Manager. This shows that technical and product-based roles dominate remote hiring.

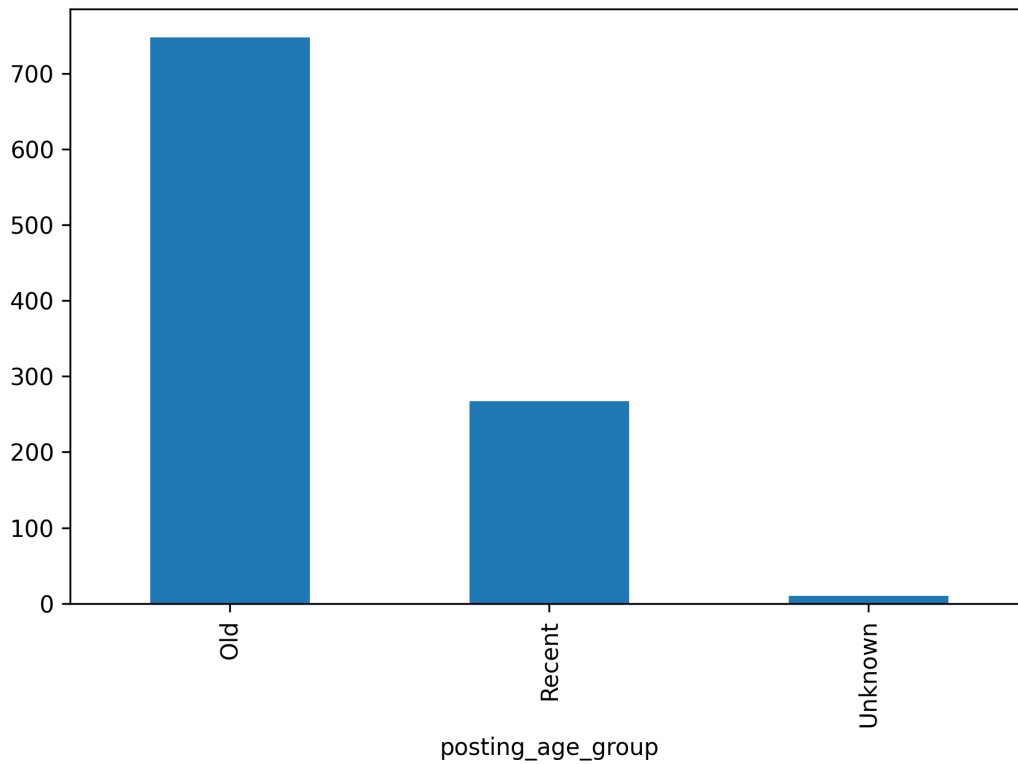

Skill Demand

Design and Support are the most in-demand skills, followed by Technical, Security, and Growth. This indicates that remote companies prioritize both product experience and system reliability.

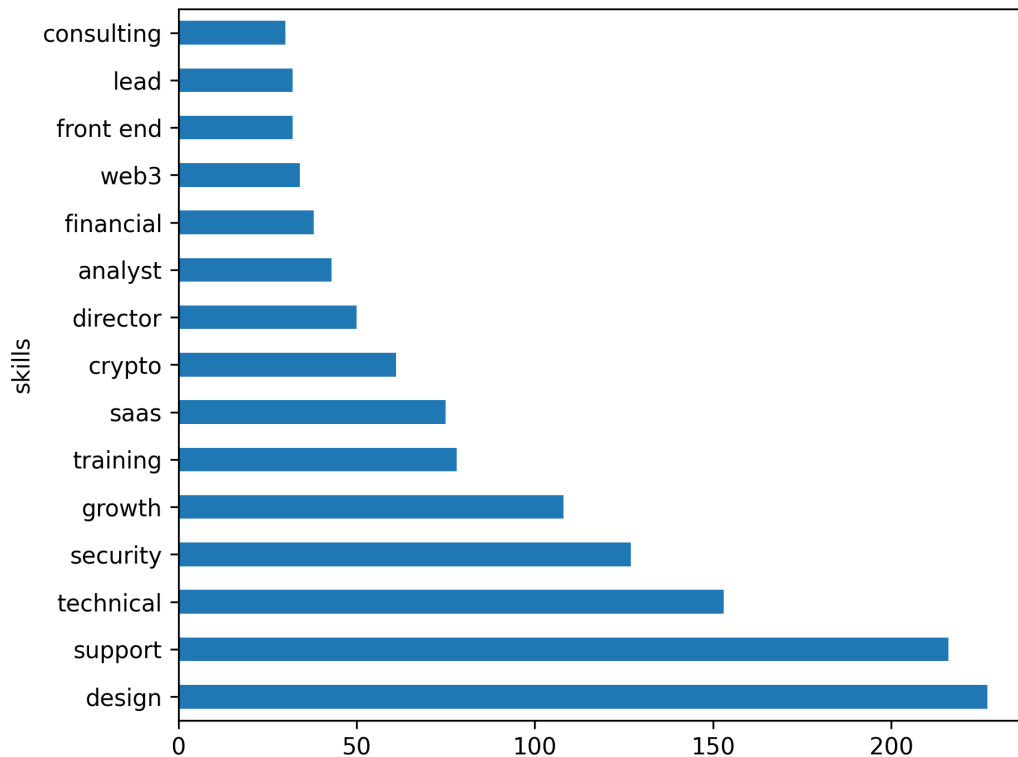

Hiring Activity

About 26% of jobs were posted recently, while most jobs remain open for months, suggesting ongoing hiring but with high competition or niche requirements.

Skill Frequency Comparison

The frequency comparison highlights how certain skills like Design, Support, Security, and SaaS dominate the remote job market.

Limitations

This analysis is based only on RemoteOK data. Some scraped fields contained noise such as UI text and missing values, so results may not fully represent the entire remote job market.
